Summary

ML Engineer with 8 years of experience in data science, including 4 years focused on machine learning. Experienced in building scalable data pipelines and ML systems on large, complex datasets. Driven to work at the intersection of data engineering and ML, designing pipeline infrastructure with a direct understanding of what models actually need from data.

Education

- **Ph.D. in Particle Physics** 10/2017 – 07/2021
University of Ferrara Ferrara, Italy
Institute of Nuclear Physics Krakow, Poland
- **M.Sc. in Applied Physics** 02/2016 – 05/2017
Krakow University of Technology Krakow, Poland
- **B.Sc. in Applied Physics** 09/2012 – 02/2016
Krakow University of Technology Krakow, Poland
- **B.Sc. in Civil Engineering** 09/2011 – 02/2015
Krakow University of Technology Krakow, Poland

Experience

- **Postdoctoral Researcher in ML** 01/2022 – 05/2026
Høgskulen på Vestlandet Bergen, Norway
 - Built end-to-end, multi-stage data pipelines processing high-volume physics datasets, from raw ingestion to model-ready outputs
 - Designed scalable ETL/ELT workflows for data transformation and feature engineering
 - Implemented data validation and quality checks across pipeline stages
 - Tracked data versions, experiments and model artifacts using MLflow and W&B for full pipeline observability
 - Maintained well-tested, maintainable code with automated testing, refactoring and CI/CD via GitHub Actions
 - Communicated analytical results to cross-functional teams of engineers, analysts and domain experts
- **Affiliated Researcher** 01/2022 – 12/2025
ATLAS / CERN Geneva, Switzerland
 - Developed data transformation software within a distributed processing framework (Athena) operating at large scale
 - Built and maintained modular data processing components integrated into high-throughput workflows
 - Optimized pipeline performance and refactored legacy code within a large collaborative codebase
 - Validated output data quality and interpreted results to confirm pipeline correctness
 - Collaborated with developers, analysts and domain experts on shared data tooling and infrastructure
- **Affiliated Researcher** 12/2017 – 03/2021
LHCb / CERN Geneva, Switzerland
 - Built an automated data quality monitoring system (C++/Python/LabVIEW) for continuous QA of measurement outputs
 - Developed data processing scripts and tooling for structured measurement pipelines
 - Analyzed QA output data to detect anomalies and failure patterns across large datasets
 - Explored ML-based anomaly detection for automated performance classification
- **R&D Physics Intern** 04/2016 – 09/2016
Camlin Technologies Zurich, Switzerland
 - Built data collection and processing workflows for semiconductor measurement data
 - Analyzed experimental measurement data to extract and compare material properties
 - Collaborated with software developers and physicists on shared analysis workflows

repository notebook showcase publication	Selected Projects Tau Supersymmetry Search Boosted Decision Trees Neural Networks - Developed a supervised ML pipeline for multiclass classification, tracked with MLflow - Trained and optimized classifiers with hyperparameter tuning via Optuna - Implemented ML-based regions construction and statistical hypothesis testing Tau Anomaly Detection Autoencoder Variational Autoencoder - Developed an unsupervised ML pipeline for anomaly detection, tracked with W&B - Trained and optimized models with hyperparameter tuning via Ray Tune - Implemented reconstruction error anomaly scoring and latent space analysis Tau Energy Scale Mixture Density Network Neural Networks - Developed a probabilistic regression model with uncertainty estimation - Trained with Huber loss pretraining and NLL fine-tuning for density estimation - Evaluated model performance with energy response and resolution histograms Sphalerons and Black Holes Convolutional Neural Network Boosted Decision Trees - Optimized high-capacity models to classify rare, low frequency events - Built a pipeline encoding raw detector signals as multi-channel images for CNN input - Compared high-level features with raw pixel data to maximize signal sensitivity Di-Tau Reconstruction Software Development Data Science - Engineered a C++ analysis framework for large-scale physics reconstruction studies - Benchmarked multiple algorithm configurations to optimize reconstruction efficiency - Evaluated input variations to establish performance baselines Elementary Cells Software Development Data Science - Developed automated C++/Python/LabVIEW software for hardware quality assurance - Analyzed array performance via noise, dark count and threshold measurements - Explored ML-based classification for detector signal identification
Currently Learning: - PySpark - Databricks - dbt - Azure	Technical Skills Programming Languages & Tools: - Python, C++, SQL (PostgreSQL), Bash, Linux - Git, Jupyter, pytest, uv, conda Data Processing & Visualization: - NumPy, pandas, SciPy - Matplotlib, seaborn, Plotly Machine Learning & Deep Learning: - scikit-learn, XGBoost - PyTorch, PyTorch Lightning Tuning & Explainability: - Optuna, Ray Tune, SHAP Data & ML Infrastructure: - Docker, GitHub Actions, FastAPI, DVC - MLflow, W&B, Hydra
